

SATISFACTION

Satisfaction with Development

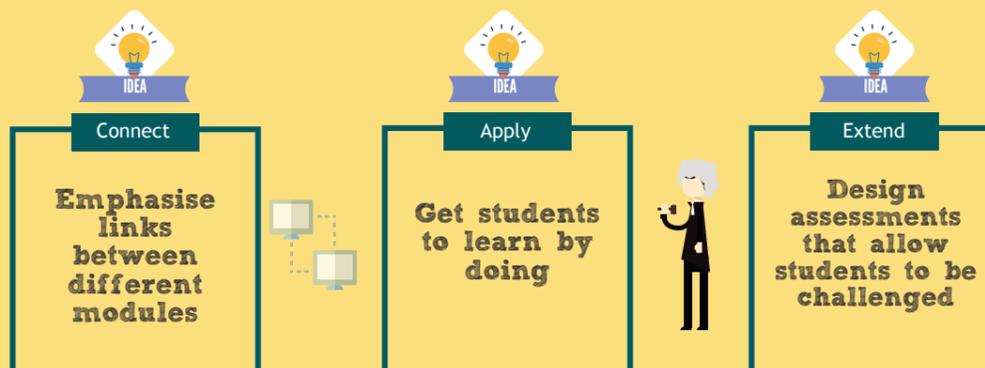

Intellectually stimulating courses where staff make the subject interesting, explaining it clearly and encouraging students to achieve their best, are more likely to have students who are satisfied with their development. Timely, formative feedback is essential.

Satisfaction with Challenge

Students who are challenged to explore ideas in depth, to bring together information together from different topics and to apply what they have learned are likely to be satisfied with their academic opportunities. Designing fair assessments that provide opportunities for all students to be stretched is critical.

Academic Satisfaction

Students who regard their time at university as an opportunity to expand their academic knowledge will value feeling developed and challenged.
